Phạm Trung Đức

Backend Developer

0329255823 ptrungduc1011@gmail.com https://phamtrungduc.info Hà Nội

CAREER OBJECTIVE

Motivated Software Engineering student with hands-on experience in building scalable .NET applications through internship and personal projects. Seeking a .NET Fresher position to contribute to production-quality software while continuously improving my backend engineering skills

EXPERIENCE

FPT Software - Intern Backend Developer Jan 2026 - April 2026

Talent Acquisition System

- Participated in Agile-based development, collaborating in sprints, daily stand-ups, and iterative feature delivery.
- Implemented interview scheduling feature using **Redis distributed locking** to prevent race conditions and double booking in a high-concurrency environment

SKILLS

C# Core	OOP , SOLID principles , LINQ , Design Patterns , Clean Architecture
Framework	.NET Core , ASP.NET Core , RESTful API , Entity Framework
FrontEnd	HTML , CSS , Bootstrap , JavaScript , ReactJS
Database	SQL Server , PostgreSQL , Redis
Real-Time /Asynchronous Messaging	SignalR , RabbitMQ , Worker Service
Tools/DevOps/Testing	Git , Docker, Docker Compose ,CI/CD (Jenkins) , Postman , Agile Scrum , xUnit
Soft Skill	Problem solving , business communication , adaptability ,teamwork

PROJECT

Food Ordering Microservices Dec 2025 - May 2026

Developed a microservices-based food ordering system following Domain-Driven Design (DDD) for scalable and maintainable services

Link source : https://github.com/khongphaiduc/food-ordering-microservices-ddd

- **Role :** Solo Developer
- **Tech Stack:** ASP.NET Core ,Web API (RESTful API) ,gRPC, EF Core, SQL Server, PostgreSQL, MinIO, Redis, RabbitMQ , SignalR , JWT, ReactJS

Key Features

- Implemented an AI-based personalized recommendation engine utilizing data from user interactions
- Developed inventory deduction service in a microservices architecture using **atomic database updates** to prevent race conditions and overselling under concurrent requests.
- Implemented PayOS webhook integration to automatically verify payment results and synchronize order status, ensuring reliable payment confirmation and reducing manual intervention
- Developed a real-time order management system with SignalR, allowing staff to instantly receive and handle new orders, significantly improving operational responsiveness.

Hotel Booking Management System Aug 2025 - Dec 2025

A web-based hotel management platform that simplifies hotel operations with online booking, secure payments, guest management, and business reporting.

Link source : https://github.com/khongphaiduc/hotel-manager-booking

- **Role :** Solo Developer
- **Tech Stack:** C# , ASP.NET Core Web MVC, EF Core, SQL Server, Redis, RabbitMQ, SignalR , JWT, OAuth2 , HTML , CSS Bootstrap.

Key Features

- Built a full-stack hotel booking system with secure authentication (Google OAuth2, cookies) and role-based access control
- Designed and implemented room, booking, and service management modules with real-time status updates.
- Integrated online payment gateways (VNPAY, PayOS) and automated background tasks for booking lifecycle handling.
- Implemented **Redis-based distributed lock** to resolve **race conditions** and **prevent overbooking** during high-concurrency periods.

Impact

- **Implemented Redis** caching for frequently queried room lists, reducing database calls and **improving API response times by 66%** in performance tests.
- Reduced booking API response time **from ~3–5 seconds to under 1 second** by offloading email sending to **RabbitMQ-based** background processing.

EDUCATION

FPT University 2022 - Present

Software Engineering

CERTIFICATIONS

IELTS 6.0 2025
